Secondary dust collection system successfully commissioned in the steelworks of JSW Steel

SMS Demag AG, a company of the SMS group, Germany, has successfully commissioned a secondary dust collection system for a BOF steelworks at Jindal South West Steel Limited (JSW Steel), India.

With an extraction capacity of 1.6 million cubic meters per hour, the system captures all of the diffuse dust emissions from the BOF Steelworks No. 1 at JSW Steel. The dust-laden air is then efficiently cleaned in a powerful filter house with the aid of fabric bag filters.

The works, supplied by SMS Demag, at the Toranagallu location in the Indian federal state of Karnataka possesses three 150-t converters, a primary dust collection system and a converter gas recovery system.

At the same location, SMS Demag is currently erecting a second oxygen steelworks, with continuous slab casters, for JSW Steel.
